Chad Koslovsky

Hands-on systems engineering | People, offices and infrastructure

Milliken, Colorado · chad@koslovsky.xyz

IT Systems Administrator | Re:Build Manufacturing

01 PROFILE

I build and look after the systems people need to do their work, from a client's aging office network to shared datacenter infrastructure. My background combines hands-on server and endpoint work, NOC escalations and direct client support, with a habit of making recovery and technical handoffs explicit.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Current

Own infrastructure, applications and direct IT support through a referral-based technical practice; clients call me when they need help.

Design and deploy client systems, build tenant-aware access and support boundaries, and bring in specialists when the work calls for additional craft.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and handled escalations through a multiyear engineering tenure and company purchase; later held sole systems-engineering responsibility for about a year, with NOC first-line coverage continuing.

Migrated workloads from Hyper-V and VMware ESXi into Docker and Kubernetes, upgraded server and firewall infrastructure, and ran SOC 1/SOC 2 audits with operating procedures and recovery evidence.

Systems / Software Engineer · Office Evolution | 2014-2015

Built shared applications connecting CRM, provisioning, onboarding and service operations across locations.

Made cross-department handoffs explicit in the tools people used, working with the CEO and CIO on the supporting systems.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported networks, systems and endpoints across managed-service client environments, including on-call support and antivirus services.

Built diagnostic and support tooling for recurring problems and worked directly with business owners and end users through diagnosis and recovery.

Infrastructure and Systems Focal · IBM | 2010-2012

Operated shared enterprise infrastructure and coordinated changes, incidents and escalations across application, infrastructure and vendor teams.

Automated audit and backup workflows and managed virtualization test labs and hosted desktop platforms.

03 SELECTED WORK

Excell Services | Office and branch infrastructure · Technomancy IT client, Wray, Colorado

Excell Services was my largest client while I operated in Wray. I replaced or rebuilt legacy servers and employee computers, upgraded the network, and helped bring a satellite location online with VPN, Windows Server and Active Directory access.

Investigated wasted network costs and secured a one-time $15,000 CenturyLink refund alongside the hands-on infrastructure work.

Technomancy platform | Making recovery inspectable · Own technical practice and client-operations product

For the platform behind my support practice, I built delivery tooling that records image identity and deployment status, applies migrations, and checks container health and public HTTP responses.

A separate restore-verification workflow checks a backup checksum, restores into a disposable PostgreSQL instance and checks table counts, giving recovery work a concrete validation path.

ProofMark | Identity, documents and signing records · Completed client engineering contribution

For ProofMark, an AGPL document-signing product, I completed a client contribution designing the workflow across identity, document/PDF fields, routing and audit history.

I kept security-sensitive state and fallback paths explicit, connecting signing, verification and the associated record across the application and its integrations.

04 CAPABILITIES

Windows Server, Active Directory and Microsoft 365 · Networks, VPN connectivity and endpoint troubleshooting · VMware/Hyper-V, Linux and Azure support · PowerShell, Python and shell automation · Recovery verification, monitoring and on-call escalation
